	Pear - Espalier	3 Tier Espalier	Bartlett, Bosc, Red Clapps
	Plum - 4 Way Combo	Semi-Dwarf	Brooks, Green Gage, Italian Prune, Satsuma, Seneca, Shiro, Stanley, Yellow Egg

Figs Tree Care

Care: Figs require full sun all day to ripen. Roots are greedy, traveling far beyond the tree canopy. Figs are not fruit trees for small spaces. The fine roots that invade garden beds, however, may be cut without loss to the tree. In the Pacific Northwest, we need to grow them in the warmest location possible; against a sunny wall would be best. For container grown plants, replace most of the soil in the tub every three years and keep the sides of the tub shaded to prevent overheating in sunlight. Figs are generally hardy in zones 7-10.

Young fig tees should be watered regularly until fully established. Mulch the soil around the trees to conserve moisture. If a tree is not getting enough water, the leaves will turn yellow and drop. Drought-stressed trees will not produce fruit and are more susceptible to disease.

Figs must be allowed to ripen fully on the tree before they are picked. They will not ripen if picked when immature. A ripe fruit will be slightly soft and starting to bend at the neck. Harvest the fruit gently to avoid bruising. Fresh figs do not keep well and can be stored in the refrigerator for only 2 - 3 days.

Fig trees are productive with or without heavy pruning. It is essential only during the initial years. Trees should be trained according to use of fruit, such as a low crown for fresh-market figs. Since the crop is borne on terminals of previous year's wood, once the tree form is established, avoid heavy winter pruning, which causes loss of the following year's crop. It is better to prune immediately after the main crop is harvested, or with late-ripening cultivars, summer prune half the branches and prune the remainder the following summer.

Figs

	Name	Size Ht.	Information
	Beer's Black	2-3'	Great compact growing form. Medium sized violet figs with a reddish-pink interior.
	Black Mission	20-30'	Especially sweet dark, black fruit in late summer. Highly adaptable but performs best in hot, dry locations.
	Brown Turkey	10-30'	This plant is self-pollinating so no need for multiple plants. It produces two crops of its delicious edible figs one in the late spring to early summer and the second in the late summer to early fall.
	Celeste	4-8'	Violet coloured figs with rose-red flesh. Tastes delicious fresh or dried.

	Name	Size Ht.	Information
	Chicago Hardy	10-20'	Rich, sweet fruit that can be eaten fresh, stored, canned or dried. Best fig for colder climates. Can die down to ground in winter, but will still fruit.
	Fignomenal	2-3'	Easy to grow, produces fruit year round, great taste
	GE Neri Everbearing	6-10'	Produces exceptionally large purple skinned figs with sweet reddish flesh.
	Ischia	4-10'	Heavy producer of small to fairly large fruit that ripens to greenish yellow and has a rich flavor
	Kadota	15-25'	A reliable fall harvest of especially sweet, greenish yellow fruit.
	Lattarula	10-15'	Yellow fruit with amber coloured flesh. Excellent for cooler areas.
	Little Ruby	3-6'	The perfect Fig for growing in containers on your patio! Figs are smaller than most varieties.
	Olympian	8-12'	Very vigorous and productive, producing a strong breba crop on the pervious seasons growth.
	Texas Everbearing	6-10'	Large fruit that is sweet and nearly seedless.
	Violette de Bordeaux	6-10'	Produces a small abundance of small to medium size purple-black fruit with a very deep red strawberry pulp
	White Marseilles	8-12'	Green skinned fruit with white flesh that is excellent for eating fresh or dried.
	Yellow Longneck Everbearing	8-12'	Large yellow figs with a sweet amber flesh. Great for fresh eating or preserves.

Almonds, Jujubes, Mulberries, Persimmons & Nuts

Almonds

	Name	Size	Information
	Halls Hardy	8-15'	Large, hard-shell nuts give way to bittersweet kernels.
	Texas Mission	10-15'	With pollination support, this tree becomes a reliable heavy producer of hard, well sealed almonds.

Jujubes

	Name	Requires Pollinizer	Information
	Lang	Yes	Crisp and flavorful fruit is delicious eaten fresh, dried, or candied.
	Li	No	Attractive, easy-to-grow tree: hardy, drought-resistant, virtually pest and disease free. Requires long, hot summer.

Mulberries

	Name	Size	Information
	Black Beauty	15'	Produces tasty sweet/tart black fruit in August-September.
	Pakistan	30-45'	Yields fruit from late Spring through much of Summer
	Persian	12-15'	Produces a large, blackberry-like fruit that is dark purple to black.
	Russian White	18-25'	Interesting pinkish white to violet edibles sweet fruits in late summer.

Persimmons

	Name	Size	Information
	Fuyu Jiro	18-20'	Late midseason. Self fertile. Great fall colour.
	Giant Fuyu	10-12'	Late harvest – fruit appears in October and stays on the tree all the way through January
	Izu	10-12'	Ripens its fruit the earliest of any of the high quality Asian persimmons and is also non-astringent and of medium size
	Maru	10-12'	In October the fruit ripens to an cinnamon orange color and the flesh a chocolate brown.
	Saijo	15-20'	In late fall, the upright, rounded tree adds beauty to the landscape when its green foliage turns brilliant shades of orange, yellow, and red.
	Tamopan	20-30'	Extra large golden-red fruit. Very sweet and juicy.

Hazelnuts

	Name	Requires Pollinizer	Fruiting Time	Information
	Jefferson	Yes (Theta)	September	Large delicious nuts, disease-resistant variety
	Theta	Yes (Jefferson)	September	Medium size nuts, immune to Filbert blight
	Yamhil	Yes (Jefferson or Gamma)	September	Large delicious nuts, resistant to Filbert blight

Walnuts

	Name	Requires Pollinizer	Fruiting Time	Information
	Carpathian	No	Early October	Medium sized nuts with a thin shell. Can withstand cold weather as well as hot, dry summers.
	Cascade	Partially Self Fertile (More productive with 2 nd variety)	Mid October	Nuts are buttery and flavourful, large trees mature at 30 to 40'
	Manregion	Partially Self Fertile (More productive with 2 nd variety)	October	Large easy to crack nuts
