	Pear - Espalier	3 Tier Espalier	Bartlett, Bosc, Red Clapps
	Pear, Asian – Espalier	3 Tier Espalier	Chojuro, Shinseiki, Nijiseiki
S/O	Pear - 4 Way Combo	Semi-Dwarf	Anjou, Bartlett, Comice, Flemish Beauty, Red Bartlett, Rescue
S/O	Plum - 4 Way Combo	Semi-Dwarf	Brooks, Green Gage, Italian Prune, Satsuma, Seneca, Shiro, Stanley, Yellow Egg

Fig Tree Care

Figs require full sun all day to ripen. Roots are greedy, traveling far beyond the tree canopy. Figs are not fruit trees for small spaces. The fine roots that invade garden beds, however, may be cut without loss to the tree. In the Pacific Northwest, we need to grow them in the warmest location possible; against a sunny wall would be best. For container grown plants, replace most of the soil in the tub every three years and keep the sides of the tub shaded to prevent overheating in sunlight. Figs are generally hardy in zones 7-10.

Young fig tees should be watered regularly until fully established. Mulch the soil around the trees to conserve moisture. If a tree is not getting enough water, the leaves will turn yellow and drop. Drought-stressed trees will not produce fruit and are more susceptible to disease.

Figs must be allowed to ripen fully on the tree before they are picked. They will not ripen if picked when immature. A ripe fruit will be slightly soft and starting to bend at the neck. Harvest the fruit gently to avoid bruising. Fresh figs do not keep well and can be stored in the refrigerator for only 2 - 3 days.

Fig trees are productive with or without heavy pruning. It is essential only during the initial years. Trees should be trained according to use of fruit, such as a low crown for fresh-market figs. Since the crop is borne on terminals of previous year's wood, once the tree form is established, avoid heavy winter pruning, which causes loss of the following year's crop. It is better to prune immediately after the main crop is harvested, or with late-ripening cultivars, summer prune half the branches and prune the remainder the following summer.

FIGS		
Name	Information	Size Ht.

FIGS		
Name	Information	Size Ht.
S/O Beer's Black	Great compact growing form. Medium sized violet figs with a reddish-pink interior.	2-3'
Black Mission	Especially sweet dark, black fruit in late summer. Highly adaptable but performs best in hot, dry locations.	20-30'
S/O Celeste	Violet coloured figs with rose-red flesh. Tastes delicious fresh or dried.	4-8'
S/O Chicago Hardy	Rich, sweet fruit that can be eaten fresh, stored, canned or dried. Best fig for colder climates. Can die down to ground in winter, but will still fruit.	10-20'
GE Neri Everbearing	Produces exceptionally large purple skinned figs with sweet reddish flesh.	6-10'
S/O Ischia	Heavy producer of small to fairly large fruit that ripens to greenish yellow and has a rich flavor	4-10'
Lattarula	Yellow fruit with amber coloured flesh. Excellent for cooler areas.	10-15'
Little Ruby	The perfect Fig for growing in containers on your patio! Figs are smaller than most varieties.	3-6'
Texas Everbearing	Large fruit that is sweet and nearly seedless.	6-10'
Violette de Bordeaux	Produces a small abundance of small to medium size purple-black fruit with a very deep red strawberry pulp	6-10'
White Marseilles	Green skinned fruit with white flesh that is excellent for eating fresh or dried.	8-12'
Yellow Longneck Everbearing	Large yellow figs with a sweet amber flesh. Great for fresh eating or preserves	8-12'

MULBERRIES, PAW PAW, PERSIMMONS, QUINCE & NUTS

ALMONDS		
Name	Information	Size
S/O Hall's Hardy	This tree is considered both a nut tree and an ornamental tree. It yields nuts for human and wildlife consumption and adds visual interest and beauty to landscaping.	15-20'
S/O Texas Mission	With pollination support, this tree becomes a reliable heavy producer of hard, well sealed almonds.	10-15'

MULBERRIES		
Name	Information	Size
S/O Cooke's Pakistan	Yields fruit from late Spring through much of Summer	30-45'
S/O Dwarf Everbearing	Small space requirements, but full-sized berries.	10-15'

PAW PAW

Small, deciduous trees producing a fruit that has a taste that is a mix of banana, mango and cantaloupe. For best results plant two varieties together to maximize fruit production.

Name	Information
S/O Susquehanna	The latest ripening of all the Paw Paws. Fruit is very sweet and richly flavourful with very few seeds.

PERSIMMONS

Name	Information	Size
S/O Chocolate	Medium to small oblong, reddish-orange fruit, with a sweet brown flesh. Astringent.	20-30'
S/O Hachiya	Non-astringent when ripe. Largest and best cooking quality persimmon.	20-30'
S/O Tamopan	Extra large golden-red fruit. Very sweet and juicy.	20-30'
S/O Tanenashi	Bright orange, seedless, cone shaped fruit. Very productive. Bears fruit at a younger age than most Persimmons.	15-20'

QUINCE

Name	Information	Requires Pollinizer	Fruiting Time
Low Stock Champion	Produces a regular, heavy crop of round pear-shaped fruits that are greenish-yellow in colour	Yes	Early

HAZELNUTS

Name	Information	Requires Pollinizer	Fruiting Time
S/O Jefferson	Large delicious nuts, disease-resistant variety	Yes (Theta)	September
S/O Theta	Medium size nuts, immune to Filbert blight	Yes (Jefferson)	September
Low Stock Yamhil	Large delicious nuts, resistant to Filbert blight	Yes (Jefferson or Gamma)	September
Combo	2 varieties per pot	No	September

WALNUT

Name	Information	Requires Pollinizer	Fruiting Time
Low Stock Carpathian	Medium sized nuts with a thin shell. Can withstand cold weather as well as hot, dry summers.	No	Early October
S/O Cascade	Nuts are buttery and flavourful, large trees mature at 30 to 40'	Partially Self Fertile (More productive with 2 nd variety)	Mid October

WALNUT

S/O

WALNUT			
Name	Information	Requires Pollinizer	Fruiting Time
Manregion	Large easy to crack nuts	Partially Self Fertile (More productive with 2 nd variety)	October
