Clematis Care Guide

Choose the Right Spot

Clematis thrive with cool, shaded roots and sunlit foliage. Plant low-growing perennials around the base or add a layer of aged bark to maintain root moisture and temperature.

Soil & Planting

Well-drained, organic-rich soil is essential. Before planting, amend with compost or aged manure and add a handful of bone meal to promote strong roots.

Watering

Keep soil consistently moist but not waterlogged. Mulching with aged bark helps retain moisture and keeps roots cool.

Support & Training

Clematis are natural climbers—install a trellis or arbor and gently tie vines to guide their growth without damaging tendrils.

Fertilizing

Apply Home & Garden Excellence Rose & Flowering Plant Food (10-12-14) in spring to boost plant health and encourage blooming.

Pruning by Group

- Group A: Blooms on last year's growth. Lightly prune after flowering, removing only weak or dead stems. Avoid late pruning.
- Group B1 & B2: Blooms on both old and new growth. Lightly prune in late winter (Feb/March) for a balanced shape. Remove dead wood.
- Group C: Blooms on current season's growth. Cut back to two strong buds per stem in late winter to maintain control and encourage blooms.

Following these steps will ensure a healthy, vibrant clematis with beautiful blooms season after season!

Bi-Colour Clematis

Name	Pruning Group
Vancouver Starry Night	B2

Blue

Name	Pruning Group
Blue Boy	B1
Daniel Derona	B1
Royalty	B1
Vancouver Blue Lion	B1
Vancouver Daybreak	B1
Vancouver Deborah Dahl	B1
Vancouver Sea Breeze	B2
Vyvyan Pennell	B1

Pink
